

SEIZURE BLS

ALWAYS USE BODY SUBSTANCE ISOLATION PRECAUTIONS

INDICATION

- Patient with reported or continuing seizure activity

TREATMENT

- BLS RMC

SPECIAL CONSIDERATION

- Consider treatable etiologies (hypoglycemia, hypoxia, narcotic overdose, unusual odor of alcohol, signs of trauma, medic alert tag)
- Be attentive to excessive oral secretions, vomiting, and inadequate tidal volume
- Treatment should be based on the severity and length of the seizure activity

DOCUMENTATION- ESSENTIAL ELEMENTS

- Past medical history (i.e., seizures, diabetes)
- Number, description, duration of seizures
